DETAILED ACTION

1. ***Election/Restrictions.***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-60, drawn to a process of using a product for ordering, paying for and delivering goods and services, classified in class 705, subclass 26.
 - II. Claims 61-114, drawn to a product to order, pay for and deliver goods and services, classified in class 700, subclass 231.
2. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product for the purpose other than the ordering, paying for and the delivery of goods and services. Each of the independently claimed steps of the product can be utilized in the execution of financial transactions that require third party validation/verification with asymmetric algorithms. The A3 and A8 algorithm modules can be utilized in combination with participant's keys and numbers to compute a session key for future identity and no repudiation documentation. The various model modules can be utilized to provide programmed procedures to expedite the different types of financial transactions such as loans,

mortgages, etc. Since it would be a tremendous burden on the Office to consider the numerous features of each independently claimed invention, examiner requests restriction between the independently claimed process invention and the independently claimed product invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Examiner considers that since applicants independently claim the invention of this group, it is a prima facie showing, that the inventions are intended to be independent and distinct and are shown to be separately usable.

A telephone call was made to James Dresser on 05August 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel L. Greene whose telephone number is 703.306.5539. The examiner can normally be reached on M-Thurs. (8:00-5:30).

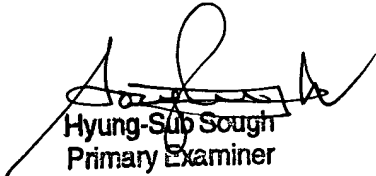

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James P Trammell can be reached on 703.305.9768. The fax phone
